In his presentation "The City Is Here For You To Use" Adam Greenfield takes everything explored in his book Everyware as a given, and a point of departure. He will assume that emergent technologies like RFID, mesh networking and shape-memory actuators will simply be part of how cities will be made from now on, and seeks to understand what impact they're likely to have on metropolitan form and experience. Adam will make the case that these technologies can help us rediscover public space, and make suggestions how we might use them to reclaim that space as a common good and a resource for all. Anyone interested in understanding how the emergence of ubiquitous and ambient informatics will shape urban communities, physically and experientially, will find plenty to sink their teeth into.
